

Identity Portal Password Reset Bot - Workflow Demonstration Report

Screenshot 1 – Password Reset Request Initiation

This screen shows the beginning of the password reset process. The user enters 'I forgot my password' and the chatbot requests the registered email address. The backend validates the email and prepares the OTP generation workflow. Modules involved: Conversational Agent, Email Verification Module, SQLite User Database, and Audit Logging System.

Screenshot 2 – OTP Verification and Password Reset Completion

The user receives an OTP through the mock SMTP email service and enters it for verification. After successful validation, a new password is entered and securely updated. The password is hashed using SHA-256 before being stored in the database.

The SQLite User Store displays the updated user record. Passwords are stored as hashes rather than plaintext values, demonstrating secure credential management and successful persistence of the reset operation.

Overall Workflow Summary

User Requests Password Reset → Enter Registered Email → Email Validation → OTP Generation → OTP Sent via Mock SMTP → OTP Verification → Enter New Password → SHA-256 Hashing → Database Update → Audit Log Generation → Password Reset Successful.
